Here's the short version: this release has improved performance and reliability. I hope everyone is able to get access to CS6 to try it out!

Let me know what you think of the major improvements in this release. You've probably used the Adobe Creative Suite once in your career. From websites to digital magazines, social media campaigns to mobile and tablet apps, professionals have relied on the tools in this suite for years. Music to your ears? You'll find the results of our most-widely used programs in the second chart. The module that you use to edit files, brushes, layers, etc., is called the Document Panel.5 When you open a document, the Document Panel creates and registers a Camera DCM. If you zoom and change the Resolution, the Document Panel checks the resolution. If it's not in good shape, it re-trims. Image editing software is getting more and more sophisticated. That means it takes more and more time to learn, and the results are readily apparent. No matter how long and hard you train on a huge body of experience, it's not enough. It's not enough time to practice, but it is enough time to forget. The long process of training only to become unable to produce is the best way to learn with video editing software. That can be a blessing if you know what you're doing and why you're doing it, and that's where software reviews come in. Using a PCMag video editor is a unique experience. There wasn't much time to get things done, and there's no one on the other end to satisfy, to cajole, to advise you to take a different approach. You learn best by doing, and by doing it over and over you refine your skills. Curation is more than just proof-reading, it's more than a last-minute "check" that focuses on the obvious until masked by something really obvious. As reviewers, we use highlights, subtle details, and day-to-day routine things to show how elements are actually used in editing and to remind ourselves of the million and one things we haven't thought about or gotten used to over time. As editors, we focus on the tools and on the work we need to do. We're often called upon to come up with new approaches or otherwise refine ideas and practices.
