The Gradient Finder seamlessly detects all the colors in a photo. You can see where the greater strength of the colors are, and use the Gradient Finder to make minor corrections to those areas. The Gradient Finder is a trade-off with the Healing Brush and is a lot less accurate in its results. The Fuel Filter can be used on vertical or horizontal selections. With a single click, the image is regenerated and edited to match the live picture, and muted colors are blended back into the image. At that point, the image looks perfect, complete, and nearly real. The Mask Slider with non-destructive masking is great for using different methods to remove unwanted areas of the image. No more removing row after row of pixels; you can simply make the area appear at any angle, and let the computer do the hard work. One of the most overlooked strengths of Lightroom is the ability to create multiple edits and then choose between them. We can blend images together to create a monochrome photo, simply by adding the two images up, or we can use the Liquify transform to stretch and distort it. It's more than just a label; we even see what things it has in common with the original image. I stopped using the trial offer years ago, when after a year or two it's time to buy a major software package. The trial was nice for a while, and if you liked it, you could convert all of those hours of work to real cash, no questions asked. But after a couple years it was time to buy, and when I had my heart set on what I wanted, I was prepared to fork out real money. So I bought Classic CC and renewed it for another few years. In that time, I have never felt more confident using a product in my life. It's super-polished, extremely powerful, and I need to use both creative and smart tools when working. And I could never imagine feeling any better about the tool after a couple years than I do right now. I can't say why, but it's just an incredible package as it is now. It's all about ease of use and power at the same time. And they probably could charge more for it, but I don't feel like it. Would the extra hundred dollars per year be worth it for the kinds of programs I need to run? I think it is.

What It Does: One way to recover lost image files is to use the Undo and Redo tools. Blue's Undo command allows you to reverse the effects of any Photoshop tool; you'll never lose control of an editing session again. The Redo tool is especially helpful when you're in a jam — just complete the last few steps of an editing task without worrying about fresh mistakes. **What It Does:** Big, bold, and predominantly blue, Blend gives you a variety of options for blending layers. You can use different eyes for a professional look within images, as well as use a variety of visual effects like gradient masks, shadows, and the hue, saturation, and brightness controls. **What It Does:** Selective Adjust is also known as the Clone tool. The new image can then be edited in your image editing software. Your new neutral layer can then be moved, transformed, or merged back into your original image without affecting the original. **What It Does:** A layer is a special group of pixels that lets you add effects to your photo. Using the Fill Layers tool, you can add objects or effects to your images. With the Add Layer Mask a shape can limit what gets applied to a new layer. **What It Does:** This Gradient Background pattern lets you create a creative background for your photos taken on the go. If you're using your iPhone, iPad, or any other phone or camera, the background will match the graphical design of your device. Block-in with patterns is a creative way to ground an image.
